

DD Report — Revoy

Revoy — series_a

- **Ask:** \$50,000,000 at \$200,000,000 valuation
- **Round:** series_a
- **Website:** <https://revoy.com>- **Founded:** unknown
- **HQ:** unknown

Synthesis

Exec summary

Revoy is a bridge-electrification bet for U.S. long-haul trucking, not a broad Class 8 market bet. ^[12][ref: market_inflection.md]

The wedge is dense diesel lanes where a swappable hybrid dolly avoids new tractor and trailer capex. ^{[9][12]}

The market thesis is plausible because BEV replacement is slow, but the economics depend on lane utilization and swap infrastructure density. ^{[9][12]}

The deal is not underwritable today because ARR, growth, margin, retention, customer count, and founder data are missing. (DealContext)

The cap table gives YC signaling, but no disclosed domain lead, fleet investor, OEM, or strategic investor validates the next phase. ^{[61][63][64]}

Beliefs Required to Invest

1. We must believe that 170-250 mile diesel lanes can support enough repeat volume for sub-5-minute swaps and high charger utilization. ^{[9][12]}
2. We must believe that fleets delay full BEV tractor replacement long enough for Revoy to become the bridge standard. ^{[10][12]}
3. We must believe that Revoy can finance hardware and infrastructure growth without utilization misses destroying unit economics. ^{[9][12]}

4. We must believe that missing traction data will show Series A quality revenue, growth, margin, retention, and customer concentration. (DealContext)
5. We must believe that the absence of a disclosed trucking, OEM, fleet, climate, or deep-tech lead is not a negative signal. [61][64][ref: coinvestor_lens.md]

Kill Shot

The cross-cutting kill shot is that this is a capital-intensive lane-density infrastructure bet being priced before the core proof is visible. Principle 1 applies. The market only works on dense lanes with high utilization and roughly 24 Revoys per commercial lane. [9] The traction file has no ARR, growth, gross margin, retention, customer count, or reverse DCF. (DealContext) The founders section has no founder data. (DealContext) The cap table shows YC and TRAC, but no disclosed domain lead or strategic customer-channel investor. [61][63][64] This can fail even if the product works.

1-line bet

Pass until lane utilization, revenue quality, founders, and domain-led capital prove this is not infrastructure risk.

Recommendation

Pass for now — revisit at signed commercial lane deployments with ARR, gross margin, utilization, retention, founder data, and strategic lead evidence.

Market

Inflection thesis

The inflection is U.S. long-haul trucking moving into a bridge-electrification phase before full BEV replacement works at fleet scale. EPA's March 2024 heavy-duty rule expects 25% of long-haul truck sales in 2032 to be ZEVs, while charging gaps and battery-swapping interest are rising in the U.S. [12].

Principle 2 applies: the bet is not Class 8 TAM, but dense diesel lanes where a swappable hybrid dolly beats new-truck capex [ref: market_inflection.md][12].

Sizing

- **Today:** The closest cited analyst market is global Class 8 trucks at \$337.50B in 2025 and \$353.80B in 2026. The U.S. Class 8 market is \$51.17B in 2026 ^[10]. This is not Revoy SAM because it includes diesel, BEV, hybrid, hydrogen, tractor, rigid, dump, and vocational trucks ^[10].
- **Five-year:** The same report gives \$539.26B global Class 8 trucks by 2034 at 5.4% CAGR ^[10]. The 2031 implied market is \$460B using the cited 2026 base and 5.4% CAGR. Growth drivers are freight demand, e-commerce, infrastructure, and electrification ^[10].
- **Wedge to serve:** Revoy's first wedge is repeatable U.S. long-haul diesel lanes of roughly 170-250 miles, where swaps take under 5 minutes and high charger utilization drives economics ^{[9][12]}. This is lane density, not all trucking.

Competitor matrix

Company	Stage	Funding	Wedge	Why we still win OR why they win
Range Energy	Startup in extended pilots	Not disclosed in provided source	Retrofittable powered trailers with 60-70% MPG improvement and planned 2026 deliveries [9]	Range wins where fleets control trailers and dock charging. Revoy wins where fleets need existing unmodified trailers and route service [9].
Trailer Dynamics	European eTrailer company	Not disclosed in provided source	Integrated powered trailer with 680 kWh pack, 40-50% diesel reduction, KRONE partnership, and DB Schenker/DSV preorders [9]	Trailer Dynamics wins if OEM-integrated trailers own Europe. Revoy wins on U.S. diesel lanes without trailer replacement [9].
KleanDrive	Stage unknown in provided source	Not disclosed in provided source	Vehicle electrification retrofit listed as Revoy's top competitor by CB Insights [6]	KleanDrive wins if fleets accept vehicle conversion. Revoy wins if no vehicle purchase and \$0 upfront matter more [12].
Tesla Semi	OEM entrant	Market cap not cited in provided source	Full battery-electric Class 8 truck with 800 kW powertrain and two range variants [10]	Tesla wins if fleets leap straight to BEV. Revoy wins if range, weight, charging, and upfront cost keep fleets hybrid [9].
Daimler Truck	Incumbent OEM	Market cap not cited in provided source	Freightliner/Western Star Class 8 platform, electrification, telematics, and fleet performance [10]	Daimler wins on service network and procurement trust. Revoy wins if fleets defer tractor replacement [10] [12].
Volvo Group	Incumbent OEM	Market cap not cited in	Factory-built electric heavy trucks and incumbent Class 8	Volvo wins if new-vehicle replacement accelerates. Revoy wins if operators

Company	Stage	Funding	Wedge	Why we still win OR why they win
		provided source	fleet relationships [10]	want reversible fuel savings on existing tractors [10][12].

Pattern match

Snowflake is the winner comp because it won with the right wedge at a visible platform shift, not by being first [ref: market_inflection.md].

Cloudera is the failure comp because it saw the same inflection early and captured a smaller prize [ref: market_inflection.md].

Teradata is the incumbent comp because enterprise buyers can stay with legacy vendors while the growth wedge migrates away [ref: market_inflection.md].

Kill Shot

Revoy may be a lane-density business trapped inside a hardware dream. ACEEE says U.S. heavy-duty battery swapping remains limited, long-haul evidence is thin, standardization is unresolved, and China swap stations cost \$1.0M-\$1.5M+ before U.S. costs are known [12]. Charged EVs says Revoy economics depend on specific 170-mile lanes, high charger utilization, and roughly 24 Revoy per commercial lane [9]. If utilization misses, this is infrastructure capex with startup balance-sheet risk.

1-line bet

Revoy wins if dense diesel lanes beat slow BEV replacement. (speculation)

Founders

No founder data extracted from the inputs. Add LinkedIn URLs or names to the memo and re-submit.

Traction

Headline metrics

- ARR: not provided. (DealContext)
- MRR: not provided. (DealContext)
- YoY growth: not provided. (DealContext)
- Gross margin: not provided. (DealContext)
- Customer count: not provided. (DealContext)
- Net retention: not provided. (DealContext)
- Ask: \$50.0M at \$200.0M valuation. (DealContext)

Public-comp benchmark

Item	Result
Public SaaS comp set	SNOW, DDOG, MDB, CRWD, ZS, S, NET, FSLY, ESTC, CFLT, GTLB, TEAM, ASAN, MNDY, HUBS, ZM, DOCN, BOX, DBX, PD, PATH, AI, BILL, TWLO, OKTA, BRZE, SHOP, WDAY, VEEV. (comp_distribution)
Growth p25 / p50 / p75	13.6% / 20.2% / 25.9%. (comp_distribution)
EV/revenue p25 / p50 / p75	2.5x / 4.5x / 8.7x. (comp_distribution)
Revoy growth percentile	Not calculable because YoY growth is not provided. (DealContext)
3 closest public comps by growth and sector	Not calculable because sector and growth are not provided. (DealContext)

Rule of 40 and Magic Number cannot be calculated without growth, FCF margin, net new ARR, and sales and marketing spend. [ref: [saas_traction_benchmarks.md](#)]

Reverse DCF — the killer output

Reverse DCF did not run because current ARR is missing. (reverse_dcf)

Margin	Years	Required growth
Not available	Not available	Not calculable without current ARR. (reverse_dcf)

You would need to believe Revoy has enough current revenue to make a \$200.0M valuation clear against public SaaS revenue multiples. (speculation)

That belief cannot be tested because the input has no ARR, no growth, and no gross margin. (DealContext)

Independent voice

- G2 result [43] is for Krita and mentions artist David Revoy, not Revoy the company. [43]
- G2 result [44] is for AppsMoka and mentions John Revoy, not Revoy the company. [44]
- Capterra results [45]_[48] are for Carevoyance and CareVoyant, not Revoy. [45] [46] [47] [48]
- Product Hunt results [49]_[52] are for Relvy, Brevoy, and Revry, not Revoy. [49] [50] [51] [52]
- Hacker News has one relevant discussion comparing Revoy to Range Energy's electric trailer concept. [53]
- Hacker News has one relevant discussion saying Revoy may need certification across truck engine families and cites a \$100,000 cost per engine family. [54]

Independent customer voice is absent in the supplied signals. (review_signals)

Employee voice is absent in the supplied signals. (review_signals)

Pattern match

Company	Snapshot matched	Outcome	Fit to Revoy
Samsara	Public IoT/software company tied to fleet operations. (speculation)	Winner. (speculation)	Weak match because Revoy ARR and software mix are missing. (DealContext)
C3.ai	Public enterprise AI software company with disputed growth quality. (speculation)	Stall-out. (speculation)	Weak match because Revoy growth and retention are missing. (DealContext)
Fastly	Public infrastructure software company that grew then compressed on multiple and growth. (speculation)	Stall-out. (speculation)	Weak match because Revoy sector is unknown and ARR is missing. (DealContext)

No valid SaaS ARR-level analog can be named because Revoy ARR is null.
(DealContext)

Kill Shot

The \$200.0M valuation cannot be underwritten from traction because the file has no ARR, no MRR, no YoY growth, no gross margin, no customer count, and no net retention.
(DealContext) The public SaaS benchmark is unusable because Revoy’s growth percentile cannot be calculated. (comp_distribution) The reverse DCF is unusable because current ARR is missing. (reverse_dcf) The independent voice is mostly false positives and two Hacker News comments, not customer proof. [43] [44] [45] [46] [47] [48] [49] [50] [51] [52] [53] [54]

1-line bet

Do not price a \$200M round until Revoy provides ARR, growth, margin, retention, and customer concentration.

Co-investors

Round-by-round funding history

Round	Date	Amount	Post-money	Lead	Other participants	Source
Seed	2022-03	\$125K	—	Y Combinator	—	[61]
Seed	2022-04	—	—	TRAC	—	[61]

notice.co secondary-market snapshot

The supplied notice.co URL maps to Revv / Reve Labs, not Revoy, so it is not usable Revoy pricing evidence. [62]

Field	Value
Last price/share	—
Implied valuation	—

Bid-ask mid	—
Last trade date	May 14, 2026

No bid/ask spread can be compared to the latest primary valuation because both the secondary quote and primary valuation are missing. [62]

Cap table summary (current round)

Investor	Type	Round(s)	Lead?	Why they exist on this cap table
Y Combinator	Accelerator / seed investor	2022-03 Seed	Yes	Revoy is YC W22, and YC lists Gustaf Alstromer as primary partner. [63]
TRAC	AI-driven VC	2022-04 Seed	Yes	TRAC says all investments are made by AI, it is industry-agnostic, and its portfolio page lists Revoy. [64][65]

Smart-money lens

Y Combinator is the high-signal logo because Revoy cleared YC selection, joined W22, and got a named primary partner. [63] YC's own top-company list includes Airbnb, Stripe, and DoorDash. [6] The cap-table signal is selection and fundraising access, not a concentrated partner-led trucking thesis. [ref: coinvestor_lens.md]

TRAC is the second signal because it states that its investment committee is data, not humans. [64] TRAC claims more than \$60M invested across more than 110 companies and says it invests across Seed, Series A, and Series B. [64] That means the signal is algorithmic pattern fit, not partner judgment. [64][ref: coinvestor_lens.md]

No third cite-backed investor appears in the supplied rounds. [61] That absence matters because Elad's cap-table lens says missing investors are informative. [ref: coinvestor_lens.md]

Expected value-add by investor

YC delivers signaling, founder network access, downstream fundraising access, and a named primary partner. [63][6] Elad's frame says most VC value-add is signaling, executive-hire pattern recognition, CEO defense, and competitor backchannels. [ref: high_growth_handbook_principles.md]

TRAC delivers capital and a portfolio network across more than 110 companies. [64] TRAC does not deliver an identifiable partner sponsor because its site says there are no humans on its investment committee. [64]

No visible strategic, fleet, OEM, or trucking-sector investor is disclosed in the supplied cap table. [61] That means no public cap-table evidence of customer-channel access or acquirer adjacency. [ref: coinvestor_lens.md]

Round dynamics

The known disclosed capital is \$125K from YC in March 2022 and an undisclosed seed round from TRAC in April 2022. [61] No post-money valuation, current Series A size, dilution, or competitive term-sheet detail is disclosed. [61] No evidence shows whether YC or TRAC is following pro rata in the Series A. [61] Existing investors not following is the loudest venture signal in Elad's framework. [ref: coinvestor_lens.md]

Pattern match

Cruise is the positive hard-tech YC comp because it was YC-backed and GM acquired it for more than \$1B. [7][8]

Flexport is the positive logistics YC comp because YC was an existing investor when Founders Fund led a \$20M Series A. [9]

Starsky Robotics is the failure comp because YC participated in its \$16.5M Series A and the company shut down after funding dried up. [10][11]

Kill Shot

The cap table is thin for a Series A hardware-logistics company. YC is a selection and network signal. [63][6] TRAC is explicitly algorithmic and industry-agnostic. [64] No public data shows a climate, trucking, fleet, OEM, or deep-tech lead underwriting the next execution phase. [61] The notice.co source is not Revoy. [62] The green flag fails if the round is being sold as smart-money validation rather than early accelerator validation. [ref: coinvestor_lens.md]

1-line bet

YC helps fundraising; absence of a domain lead is the cap-table diligence gap.
