

# DD Report — Revoy

Revoy — series\_a

- **Ask:** \$50,000,000 at \$200,000,000 valuation
- **Round:** series\_a
- **Website:** <https://revoy.com>- **Founded:** unknown
- **HQ:** unknown

---

## Synthesis

### Exec summary

Revoy is a modular truck electrification bet, not a full EV tractor bet, with a fifth-wheel dolly that claims 235 electric miles and under-five-minute swaps [37].

The investable inflection is diesel-lane fuel savings before OEM BEV replacement, supported by renewed U.S. attention to truck battery swapping [14].

The deal is unpriceable today because Revoy asks for \$50.0M at a \$200.0M valuation with no disclosed ARR, MRR, growth, margin, customer count, retention, or revenue quality. (from DealContext)

The founder section is blank and the co-investor section failed, so Principle 3 and Principle 8 diligence are incomplete. (from Founders) (from Co-investors)

The pattern is Snowflake if Revoy owns the narrow wedge before the platform shifts, Better Place if swap utilization never arrives, and Proterra if hardware capital intensity eats the company [53] (speculation).

## Beliefs Required to Invest

1. We must believe that repeat Class 8 diesel lanes can support high swap-station utilization before OEM BEVs and powered trailers close the window [14].
1. We must believe that Revoy's unmodified tractor-and-trailer compatibility beats Range Energy, Trailer Dynamics, Daimler, and Tesla on adoption speed [10] [49] [51].
1. We must believe that revenue is recurring, retained, and high-margin after energy, maintenance, warranty, financing cost, and hardware depreciation. (speculation)
1. We must believe that the missing founder and cap-table evidence does not hide execution or financing weakness. (from Founders) (from Co-investors)

## Kill Shot

The strongest reason this deal fails is that Revoy is asking investors to underwrite infrastructure, hardware, route density, fleet adoption, and financing risk without the basic proof needed to price the business. (from DealContext) North America heavy-duty electric trucks were only \$47.4M in 2025, public traction data is missing, founder diligence is absent, and co-investor diligence failed [41] (from DealContext) (from Founders) (from Co-investors). That combination makes Revoy look less like Snowflake's wedge and more like Better Place, Proterra, or ChargePoint before unit economics and utilization were proven [53] (speculation).

## 1-line bet

Pass until Revoy proves repeat-lane utilization, recurring ARR, retention, margins, founders, and cap table.

## Recommendation

Pass for now — revisit at \$10M+ recurring ARR, 70%+ gross margin, named retained fleets, and verified cap table.

---

# Market

---

## Inflection thesis

The inflection is modular truck electrification for diesel lanes, not full EV truck replacement. Revoy claims a fifth-wheel dolly with a 525 kWh LFP pack can lift diesel tractor efficiency from 6-8 MPG to 20-35+ MPG, swap in under five minutes, and run 235 electric miles without truck or trailer modifications [37]. Battery swapping is getting renewed U.S. attention because cable charging creates downtime and battery-as-a-service can cut upfront HDV cost by up to 50% [14].

## Sizing

- **Today:** The closest direct proxy is global heavy-duty electric trucks at \$1.93B in 2025; North America was \$47.4M in 2025 [40] [41]. Analyst definitions conflict, with GMI sizing electric heavy-duty trucks at \$16.97B in 2025 and broader electric-truck sources at \$18.50B in 2025 [42] [43].
- **Five-year:** The direct proxy implies \$3.86B in 2030 if Grand View's 15.1% CAGR compounds from its 2025 base (calculation from [40]). Broader electric truck forecasts reach \$58.50B by 2030, while electric commercial vehicles reach \$255.6B by 2030 when pickups, vans, buses, and medium-duty trucks are included [43] [44].
- **Wedge to serve:** The first wedge is North American Class 8 hub-to-hub lanes where route repetition supports swap-station utilization and fleets avoid new tractor capex [14]. ATRI puts 2024 fuel cost at \$0.481/mile across for-hire carriers, which is the budget line Revoy attacks before full tractor replacement [56].

## Competitor matrix

| Company                                | Stage   | Funding                               | Wedge                                                | Why we still win OR why they win                                                                                              |
|----------------------------------------|---------|---------------------------------------|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Range Energy                           | Private | \$31.5M total funding                 | Powered trailer retrofit for dry vans and reefers    | Range wins if fleets prefer trailer hardware; Revoy wins if existing unmodified trailer compatibility matters more [10] [45]. |
| Trailer Dynamics                       | Private | €25M EIB loan                         | European OEM-integrated eTrailer                     | Trailer Dynamics wins on EU OEM integration; Revoy wins on U.S. route service and existing trailers [10] [46].                |
| KleanDrive                             | Private | Not disclosed in reviewed sources     | Diesel engine repower into electric drivetrain       | KleanDrive wins where zero-tailpipe conversion is mandatory; Revoy wins where downtime and capex block adoption [7] [47].     |
| Janus Electric                         | Private | Not disclosed in reviewed sources     | Electric drivetrain conversion plus battery swapping | Janus wins where full conversion is acceptable; Revoy wins where diesel fallback matters [48] [14].                           |
| Daimler Truck / Freightliner eCascadia | Public  | €30.53B market cap as of May 14, 2026 | OEM battery-electric Class 8 tractor                 | Daimler wins if fleet replacement and charging are ready; Revoy wins during replacement-cycle lag [49] [50].                  |
| Tesla Semi                             | Public  | \$1.59T market cap as of May 15, 2026 | OEM BEV Semi with 325-500 mile range                 | Tesla wins if Semi supply and chargers scale; Revoy wins if customers keep diesel tractors [51] [52].                         |

## Pattern match

Snowflake is the winner comp because it found the narrow wedge inside a platform shift rather than selling TAM theater [ref: market\_inflection.md].

Cloudera is the limited-upside comp because it saw the same inflection earlier and captured a smaller prize [ref: market\_inflection.md].

Better Place is the failure comp because it raised \$850M for battery swapping before utilization and OEM compatibility existed [53].

## Kill Shot

The market thesis fails if Revoy is a bridge product in a bridge market. North America heavy-duty electric trucks were only \$47.4M in 2025 and are forecast at only \$120.8M by 2033, so U.S. lane density may arrive too slowly for swap-station utilization [41]. Range and Trailer Dynamics can deliver material fuel savings through trailer hardware, while Daimler and Tesla attack the end-state tractor replacement market [10] [49] [51].

## 1-line bet

Bet if Revoy owns repeat lanes before OEM BEVs and powered trailers collapse the bridge.

---

## Founders

*No founder data extracted from the inputs.* Add LinkedIn URLs or names to the memo and re-submit.

---

## Traction

---

### Headline metrics

- ARR: not disclosed. (from DealContext)
- MRR: not disclosed. (from DealContext)
- YoY growth: not disclosed. (from DealContext)
- Gross margin: not disclosed. (from DealContext)
- Customer count: not disclosed. (from DealContext)
- Net retention: not disclosed. (from DealContext)
- Ask: \$50.0M at \$200.0M valuation. (from DealContext)

## Revenue quality — what is this number, really?

1. **Stated:** no ARR, MRR, GMV, gross revenue, net revenue, or transaction volume is stated. (from DealContext)

1. **Actual:** unclear. (from DealContext)

Revoy cannot be benchmarked as SaaS until revenue type is separated from pilots, hardware, transaction volume, and recurring subscription revenue. [ref: [saas\\_traction\\_benchmarks.md](#)]

1. **Implied real ARR:** not computable.

If Revoy sells electric-trailer hardware, headline revenue may include one-time hardware sales rather than renewable software ARR. (speculation)

If Revoy operates a trailer-as-a-service model, real ARR requires contracted recurring payments net of utilization gaps, maintenance, financing cost, and customer churn. (speculation)

### 1. Diligence questions

1. What revenue is contractually committed for the next 12 months?
2. What percentage of revenue is recurring subscription, hardware sale, pilot, financing, and services?
3. What is gross margin by revenue stream after maintenance, energy, warranty, and hardware depreciation?
4. What is logo retention and net revenue retention by monthly cohort?
5. What percentage of pilots converted to renewable contracts after 12 months?

## Public-comp benchmark

| Metric                  | Revoy          | Public SaaS distribution                                                                                                                                      |
|-------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| YoY growth              | Not disclosed  | p25 13.6%, p50 20.2%, p75 25.9%                                                                                                                               |
| Company percentile rank | Not computable | 29 comps                                                                                                                                                      |
| EV / revenue            | Not computable | p25 2.6x, p50 4.3x, p75 8.7x                                                                                                                                  |
| Distribution tickers    | N/A            | SNOW, DDOG, MDB, CRWD, ZS, S, NET, FSLY, ESTC, CFLT, GTLB, TEAM, ASAN, MNDY, HUBS, ZM, DOCN, BOX, DBX, PD, PATH, AI, BILL, TWLO, OKTA, BRZE, SHOP, WDAY, VEEV |

Closest public comps cannot be named by growth plus sector because Revoy has no disclosed sector, ARR, or growth rate. (from DealContext)

Rule of 40 is unusable because growth rate and free cash flow margin are both missing. [ref: saas\_traction\_benchmarks.md]

Magic Number is unusable because net new ARR and sales and marketing spend are missing. [ref: saas\_traction\_benchmarks.md]

Net retention is the missing metric that matters most if Revoy claims recurring revenue. [ref: saas\_traction\_benchmarks.md]

## Reverse DCF — the killer output

Reverse DCF could not run because current ARR is missing. (from reverse\_dcf)

| Margin | Years | Required growth |
|--------|-------|-----------------|
| N/A    | N/A   | Not computable  |

The valuation asks the partner to underwrite \$200.0M without a revenue base. (from DealContext)

That is not a valuation question yet. It is a data-room completeness problem.

## Independent voice

Public review signals are thin and mostly false positives.

- HN mentions Revoy as a concept similar to Range Energy, with a device hitched between tractor and trailer. [\[54\]](#)
- HN flags certification complexity across truck engine families and cites \$100,000 per engine family as a cost point. [\[55\]](#)
- ProductHunt, G2, Capterra, and Glassdoor results shown are unrelated to Revoy or appear to match similar names. [\[40\]](#)[\[41\]](#)[\[42\]](#)[\[43\]](#)[\[44\]](#)[\[45\]](#)[\[46\]](#)[\[47\]](#)[\[48\]](#)[\[49\]](#)[\[58\]](#)[\[59\]](#)[\[60\]](#)[\[61\]](#)
- No verified customer review, buyer quote, retention signal, or employee signal is available in the provided review set. (from review\_signals)

## Pattern match

| Company     | ARR snapshot                                                          | Trajectory match                                                                              |
|-------------|-----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| Samsara     | \$119M ARR at IPO scale in FY2020 revenue terms                       | Winner analog for fleet-connected hardware plus recurring software. (speculation)             |
| Proterra    | Public EV fleet company with hardware-heavy revenue before bankruptcy | Failure analog for capital intensity, margin pressure, and slow fleet adoption. (speculation) |
| ChargePoint | \$241M FY2022 revenue before post-SPAC drawdown                       | Stall-out analog for infrastructure adoption outrunning unit economics. (speculation)         |

Revoy has no disclosed ARR snapshot, so these are business-model analogs rather than clean ARR-stage comps. (from DealContext)

## Kill Shot

Revoy asks for \$50.0M at a \$200.0M valuation with no disclosed ARR, MRR, growth, margin, customer count, retention, or revenue quality. (from DealContext) The strongest reason this fails is that the investor cannot tell whether the company has recurring software revenue, pilot revenue, one-time hardware revenue, or subsidized deployment volume. (from DealContext) Public-SaaS benchmarking, Rule of 40, Magic Number, and reverse DCF all break on missing inputs. [ref: [saas\\_traction\\_benchmarks.md](#)] The HN signal points to certification cost and fleet complexity rather than customer pull. [\[55\]](#)

## 1-line bet

Do not price this as SaaS until recurring ARR, retention, and gross margin are proven.

## Revenue metrics (raw data)

|      |       |               |       |
|------|-------|---------------|-------|
| ARR: | —MRR: | —ARR quality: | —GMV: |
|------|-------|---------------|-------|
